

REGIONAL OBSERVATORY FOR CIRCULAR ECONOMY AND ENERGY TRANSITION

Circular Economy – How to connect policy, research and business?

10th May 2019, Fondazione Eni Enrico Mattei, Milano

MAIN GOAL

Building of a common path to face the two main challenges that will characterize our development model in the coming decades: **the decarbonisation of the economy and the transition to a circular economy.**

The working proposal is to deal with the issues of transition with a common reference framework, first of all sharing some general objectives, and then defining areas of study in some sectors or production systems that are particularly important for our territory.

Fonte: Report IPCC 2018

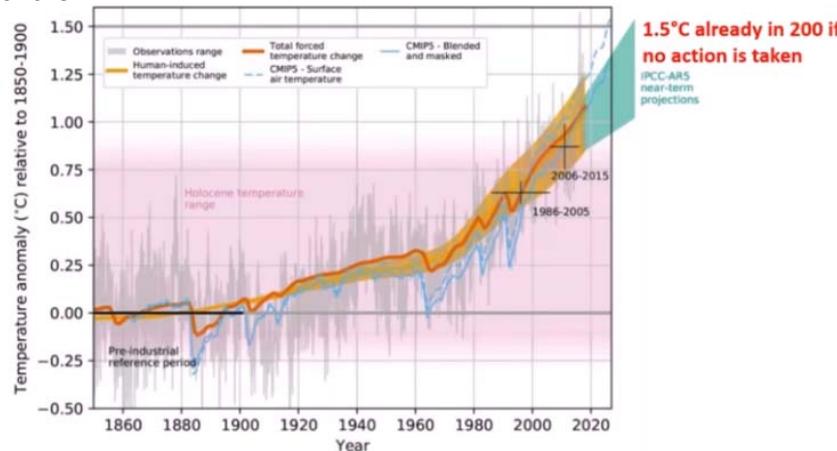

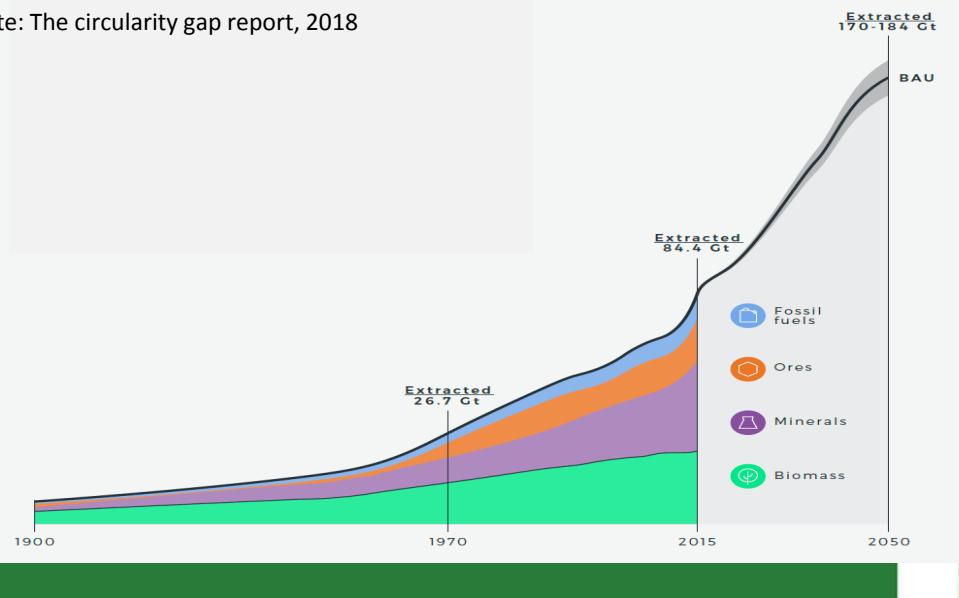

Figure 1.2: Evolution of global mean surface temperature (GMST) over the period of instrumental observations. Grey line shows monthly mean GMST in the HadCRUT4, NOAA, GISTEMP and Cowtan-Way datasets, expressed as departures from 1850–1900, with line thickness indicating inter-dataset range. All observational datasets shown represent GMST as a weighted average of near surface air temperature over land and sea surface temperature over oceans. Human-induced (yellow) and total (human- and naturally-forced, orange) contributions to these GMST changes

WHY

The Global Benefits of a Decisive Shift to a Low-carbon Economy when Compared with Business-as-usual.

Source: The results cited for the US\$26 trillion in direct economic benefits are cumulative for the 2018–2030 period, whereas the other data points reported are for the year 2030. Source: Garrido, L., et al., 2018.⁷³

HOW

INSTITUTIONAL BOARD

Chaired by the Minister for the Environment and Climate
Steering function

Contribution to strategies, planning and definition of regional measures

SECRETARIAT

Technical and scientific support for the elaboration of regional strategies

Coordination of working groups

Monitoring and results transfer

Interaction with other cross-cutting tables (integrated policies)

THEMATIC TABLES

Criticality and opportunity analysis

Preparation of legislative and regulatory proposals, financing measures and support, supply chain collaboration methods

Specific initiatives (training, dissemination, planning)

THEMATIC TABLES

- **CIRCULAR ECONOMY**

- Sewage sludge
- Melting slags
- Construction and demolition waste
- Food waste

ENERGY TRANSITION

- Energy efficiency in buildings
- Energy efficiency in industries
- Renewable energies

CONTRIBUTION TO REGIONAL STRATEGIES

PROTOCOL FOR THE ENVIRONMENT, INFRASTRUCTURE AND TERRITORY

The Regional Development Program for the XI legislature declines five priorities, among these «sustainability as a distinctive element of administrative action and as an opportunity to improve the quality of life of the citizens, reconciling the needs of productive growth and involving all the actors of the territory , from businesses, to citizens, from schools to public administrations ». With the Protocol, mutual commitments on the environment, territory, transport system and infrastructure will be signed.

REGIONAL WASTE PLAN- PRGR

The Circular Economy Package sets new and more stringent objectives for resource use efficiency and waste management, recycling and reuse, the landfill disposal. The new community provisions, and the national ones that will derive from this, will be integrated with those in force in the PRGR, to be updated in 2019, and will complete the framework of objectives and policies on raw materials and sustainable production and consumption models.

REGIONAL ENERGY AND CLIMATE PLAN

The transition to a low carbon economy, as a response to climate change, has triggered a progressive re-launch of the goals of decarbonisation and energy evolution at all institutional levels. The new regional energy and climate plan, synergistic with these objectives, will define the framework for the actions of orientation and implementation of this transition, responding to the logic of environmental and social sustainability and technological innovation.

RESEARCH, INNOVATION AND TECHNOLOGY TRANSFER PROGRAM

The Program is the governance tool with which we intend to trace the lines of development for the future of research and innovation. The objective is to raise awareness that innovation is the main key to understanding organic and sustainable growth, with the support of new methods and systems capable of increasing the efficiency of government choices.

STRUCTURAL FUNDS PROGRAMME 2021-2027

THEMATIC TABLES – EXPECTED RESULTS

SEWAGE SLUDGES

- A common knowledge framework
- Definition of limits for the use in agriculture, as deriving from the coordinated reading of national and regional laws
- Discipline for the application of the legislation concerning the use of sludge in agriculture and defecation chalks
- Construction of a shared vision on sludge prospects, to guide investments both of water service managers and sludge recuperators, also with the support of research

MELTING SLAGS

- A common knowledge framework
- Processing, for each type of residue, of a guideline describing its origin (production process), characteristics, possibility of being managed as a by-product or recovered as an "end of waste". Types: black steel mill slag, cast iron foundry slag, foundry earth and sands
- Contribution to Environmental Minimum Criteria (CAM)

THEMATIC TABLES – EXPECTED RESULTS

C&D WASTE

- Analysis of the demolition chain to favor selective demolition, and evaluate the characteristics of the recycled aggregates and their use;
- Promote the use of recycled aggregates by defining incentives and supporting tools;
- Creation of a market platform for the recycled aggregates;
- Collaboration with the Environmental Minister for defining the criteria for end of waste.

FOOD WASTE

- Introduction in administrative procedures of incentives and compensatory mechanisms, including the reduction of the municipal waste tariff for commercial businesses that donate their surpluses (collaboration with the Municipalities);
- Tools to track devolution (document support, IT tools);
- Communication campaign for citizens to reduce waste at the domestic level
